

Meeting with Mike Rilee
August 29, 2002

Minutes

(1) Current list of Plans, Goals, and Tasks

Mike thought the proposed list of plans, goals and tasks appeared reasonable. While examining them, it was discovered that some of the tasks appeared more like high level planning.

(2) Use of Database in the project. See if MySql is ok

Mike said that use of a database, such as MySql would be okay.

(3) Line between High and Low Level and the Tasks that will be passed down through the system (Task Language)

This item was skipped, because it was discussed in item (1).

(4) Hardware Functional Specification

Mike said that he would attempt to provide an initial hardware functional specification sometime early next week.

(5) SSH Key Types

It was determined that RSA1 keys would be used. Although it appeared that Mike's SSH server would use RSA2 keys, the keys currently residing on his computer were RSA1.

(6) Timing

Mike provided an explanation of the systems timing. It was described that there would be a simulation level time and a meta level time. Details of how the timing will actually work in the system still need to be ironed out.

(7) SSH Simulation Demo up and running

The SSH Simulation Demo was presented to Mike. He requested a copy of the source code. The source code was then emailed to him.
